

Excel Department Improvement Tracker (R1T & QLP Rollout Tool)

Freelancer Instruction Document – Upwork Submission (Dynamic 5-Sheet Version)

1 Purpose

Build a **simple, editable Excel tracking tool** to manage department-level process improvement initiatives. The first example initiative is the **Right 1st Time (R1T) & Quality Leadership Principles (QLP) Rollout**, which includes sub-initiatives **Quality Leadership Site Visits (QLSV)** and **Quality Observations (QO)**.

Key requirement: The workbook must be **fully editable and expandable**. The **Dashboard must be dynamic**, automatically reflecting **any phases** that exist in the tracker (not just the initial four). The output must be professional, management-ready (A3 printable), and aligned with **Rumaila branding**.

2 Deliverable Summary

- **File name:** R1T_Rollout_Tracker.xlsx
 - **Software:** Microsoft Excel 365 (Windows compatible)
 - **Delivery timeframe:** within **3 working days** of acceptance
 - **Sheets (5):**
 - **R1T Rollout Tracker** (editable table, pre-filled with example phases)
 - **Summary Dashboard** (dynamic, auto-updating)
 - **Risk / Issue Log** (table with severity formatting)
 - **User Guide** (simple how-to)
 - **Roadmap** (timeline / bars by phase)
-

3 Sheet 1 – R1T Rollout Tracker (Editable Table)

Purpose: Store all deliverables/tasks by phase; serves as single source of truth for Dashboard and Roadmap.

Columns:

Phase	Deliverable / Output	Owner	Support / Contributor	Planned Finish	Actual Finish	Progress %	Status	Next Step / Comment
-------	----------------------	-------	-----------------------	----------------	---------------	------------	--------	---------------------

Initial Example Data – Pre-fill the following (editable): Phase 1 – Foundation - R1T Policy Poster

- QLP Poster
- R1T Poster

- Introduction Pack (Kick-off)
- SharePoint Launch Page

Phase 2 – Implementation Systems - QLSV Concept Document

- QLSV Visit Form
- QO Concept Document
- QO Card / Template
- QO System Implementation Guide
- QO Data Reporting / Focal Points
- Training Materials for QLSV & QO

Phase 3 – Self-Verification - R1T Self-Verification Concept

- Self-Verification Checklist
- Pilot Plan & Feedback Template

Phase 4 – Recognition & Sharing - Recognition & Sharing Concept

- Recognition Poster / Bulletin Template
- Newsletter / Success Stories Template
- Recognition Process Guide

Build Requirements: - Convert the tracker area to an **Excel Table** (Ctrl+T) named `tblTracker`.

Reason: ensures formulas/formatting extend automatically. - **Status** data validation list: Complete, On Track, At Risk, Delayed, Not Started.

- **Conditional formatting:** - `Progress %`: Green→Red gradient data bar. - `Status`: traffic-light icon set aligned to the five statuses (or closest available 4-icon set with as text). - **Phase colour bands** (use bands or grouped styles):

P1 Purple `#2B1043` · P2 Green `#5E9E3F` · P3 Gold `#E3B231` · P4 Grey `#666666` (apply to grouped rows or use a small colour swatch column).

- **Usability:** Freeze top row, turn on filters, align % and Status centre.

4 Sheet 2 – Summary Dashboard (Dynamic)

Purpose: One-page, auto-updating management view. **Must adapt to any phases present** in `tblTracker[Phase]`.

Dynamic Phase List: - Create a **distinct phase list** that updates as phases are added. Any of the following is acceptable: - PivotTable of `tblTracker[Phase]` (Show in Tabular, Repeat Labels), or - `UNIQUE` formula (Excel 365) referencing `tblTracker[Phase]`, e.g. `=SORT(UNIQUE(tblTracker[Phase]))`.

Summary Table (driven by the dynamic phase list): - Columns: `Phase | Target Completion | % Completed | Completed / Total | Lead Owner | Status`

- Example formulas (assuming the dynamic phase is in `A2`): - **% Completed:** `=IFERROR(AVERAGEIF(tblTracker[Phase], A2, tblTracker[Progress %]), 0)` - **Completed / Total:** `=COUNTIFS(tblTracker[Phase], A2, tblTracker[Status], " Complete") & " / " &`

COUNTIF(tblTracker[Phase], A2) - **Status (text):** =IF(C2>=0.8, "✅ Complete", IF(C2>=0.5, "🟢 On Track", IF(C2>0, "🟡 At Risk", "🟡 Not Started")))

Charts & Boxes: 1. **Progress Chart** – bar or donut linked to the dynamic summary table; apply Rumaila colours (Purple, Green, Gold, Grey) in order of the four example phases; use default colours for any new phases. 2. **Status Legend** – 🟢 On Track · 🟡 At Risk · 🟡 Delayed · 🟡 Not Started · ✅ Complete. 3. **Top 3 Risks** – manual or pulled via simple references from Risk Log. 4. **Footer** – left: Rumaila logo (~2 cm high); centre: =TODAY() ; right: *Right 1st Time – The Way We Work, The Way We Lead.* (italic, purple).

Print/Layout: A3 landscape, narrow margins, fit width to single page.

5 Sheet 3 – Risk / Issue Log

Purpose: Track risks/issues that could affect rollout delivery.

Columns:

ID	Phase	Risk / Issue Description	Impact (H/M/L)	Owner	Support / Contributor
		Mitigation / Action	Target Date	Status	

Formatting & Logic: - Excel Table `tblRisks`; filters on; alternating row shading.

- Conditional format for **Impact:** H=Red, M=Amber, L=Green.

- Keep Impact & Status centre-aligned; text left elsewhere.

Initial Example Entries: - R1 – Delay in approval of R1T poster design – Impact **M** – Mitigation: escalate to GM weekly review – Target 15-Dec-25 – **Open**.

- R2 – Dependency on digital system for QO tool – Impact **H** – Mitigation: confirm preferred digital tool – Target 15-Mar-26 – **Open**.

- R3 – Checklist alignment across contractors – Impact **M** – Mitigation: joint workshop – Target 31-May-26 – **Planned**.

- R4 – Recognition process unclear – Impact **L** – Mitigation: define approval process – Target 30-Jun-26 – **Planned**.

6 Sheet 4 – User Guide (One-Pager)

Include a short, self-contained guide: 1. **Add work:** Insert rows in `R1T Rollout Tracker` (table extends automatically).

2. **Update status:** Enter `Progress %` and choose `Status` from dropdown.

3. **See results:** Dashboard updates immediately; Roadmap refreshes after date changes.

4. **Manage risk:** Log risks/issues in the **Risk / Issue Log**.

5. **Printing:** Use A3 landscape for Dashboard and Roadmap.

6. **Tip:** Keep phase names consistent to preserve summary logic.

7 Sheet 5 – Roadmap (Timeline)

Purpose: Strategic, visual timeline of phases and key deliverables.

Columns:

Phase	Start Date	End Date	Key Deliverables	% Complete	Milestone Status	Comments
-------	------------	----------	------------------	------------	------------------	----------

Visual: Gantt-style bars (or stacked bars) by phase; apply the same four Rumaila colours to the example phases; default colours okay for new phases.

Print/Layout: A3 landscape, fit to one page.

8 Branding, Protection & Quality

- **Colours:** Purple `#2B1043`, Green `#5E9E3F`, Gold `#E3B231`, Grey `#666666`.
- **Fonts:** Calibri or Arial (≥ 10 pt), consistent across sheets.
- **Protection:** Lock formulas; **leave input cells unlocked**. No passwords.
- **Consistency:** Align number/date formats; centre `%` and `Status`.
- **No macros** required.

9 Acceptance Tests (What Must Work)

1. Adding a **new phase** in the Tracker automatically appears in the **Dashboard** phase list and summary.
2. Changing **Progress %** updates **% Completed** and the **chart** without extra steps.
3. Marking a deliverable  **Complete** updates **Completed / Total**.
4. Adding a **new risk** expands the Risk Log and can be referenced in **Top 3 Risks**.
5. **A3 print previews** for Dashboard and Roadmap fit on one page.
6. All **formulas protected**, data cells editable, file opens with **no warnings**.

Final Delivery

Deliver the finished, dynamic workbook as `R1T_Rollout_Tracker.xlsx`.

It must be presentation-ready, easy to update, and future-proof for additional phases and initiatives (beyond the initial R1T/QLP example).

Tagline: *Right 1st Time – The Way We Work, The Way We Lead.*
